

For the feature slider Owl JS slider can be used.

All the banner zone should be collapsable div's.

For icons use fontawesome

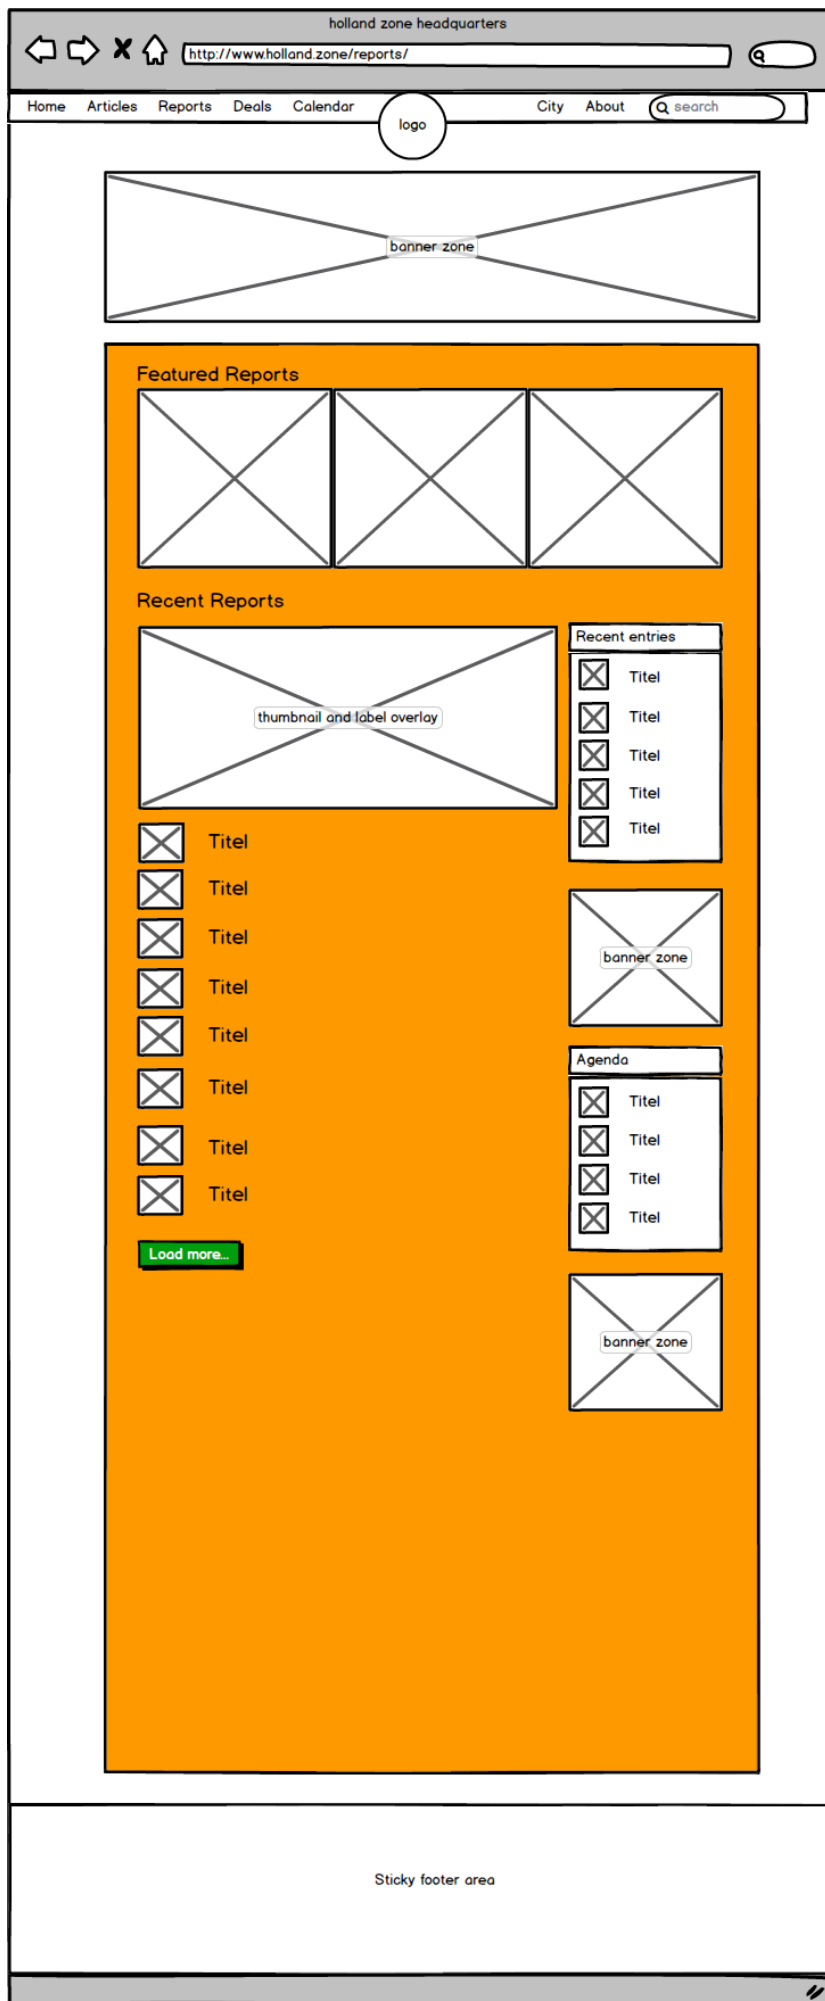

Concept. Need some characteristics as background or graphic design per city. Anyhow it should stand out that user is on the city page and instantly see which city it involves. An idea is to add an asset on the town category.

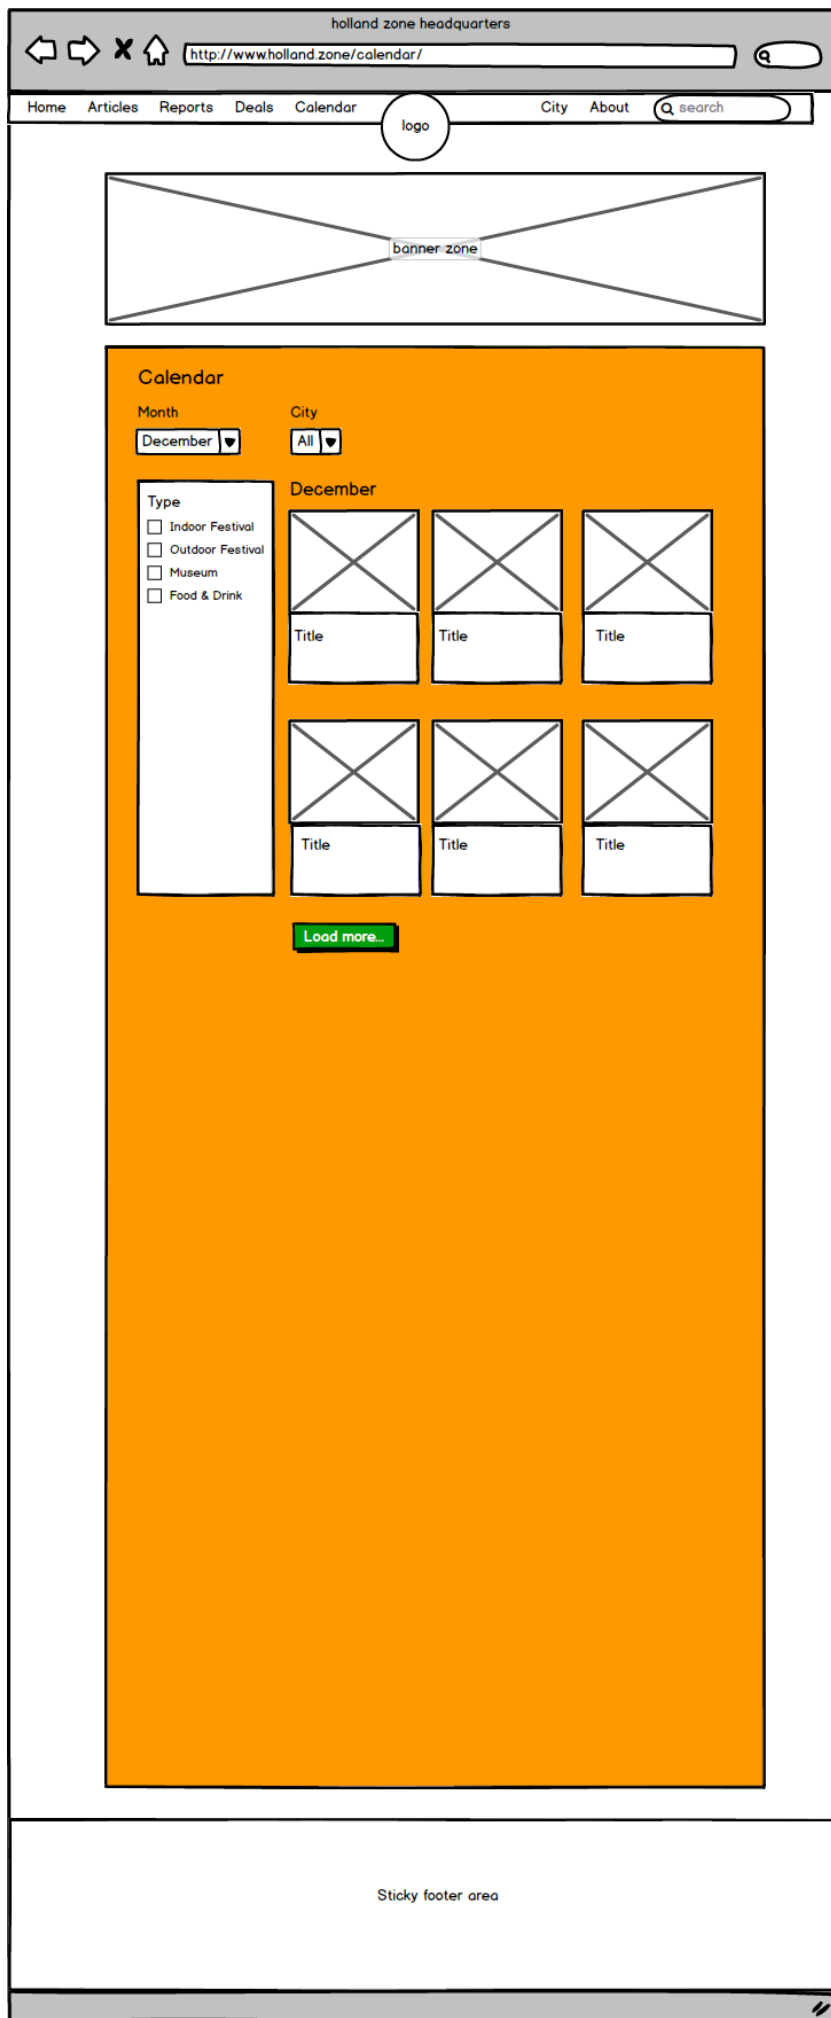

Load more button will perform an ajax call using the pagination url.

Load more with fire an ajax call using the craft url pagination.

Example will be provided

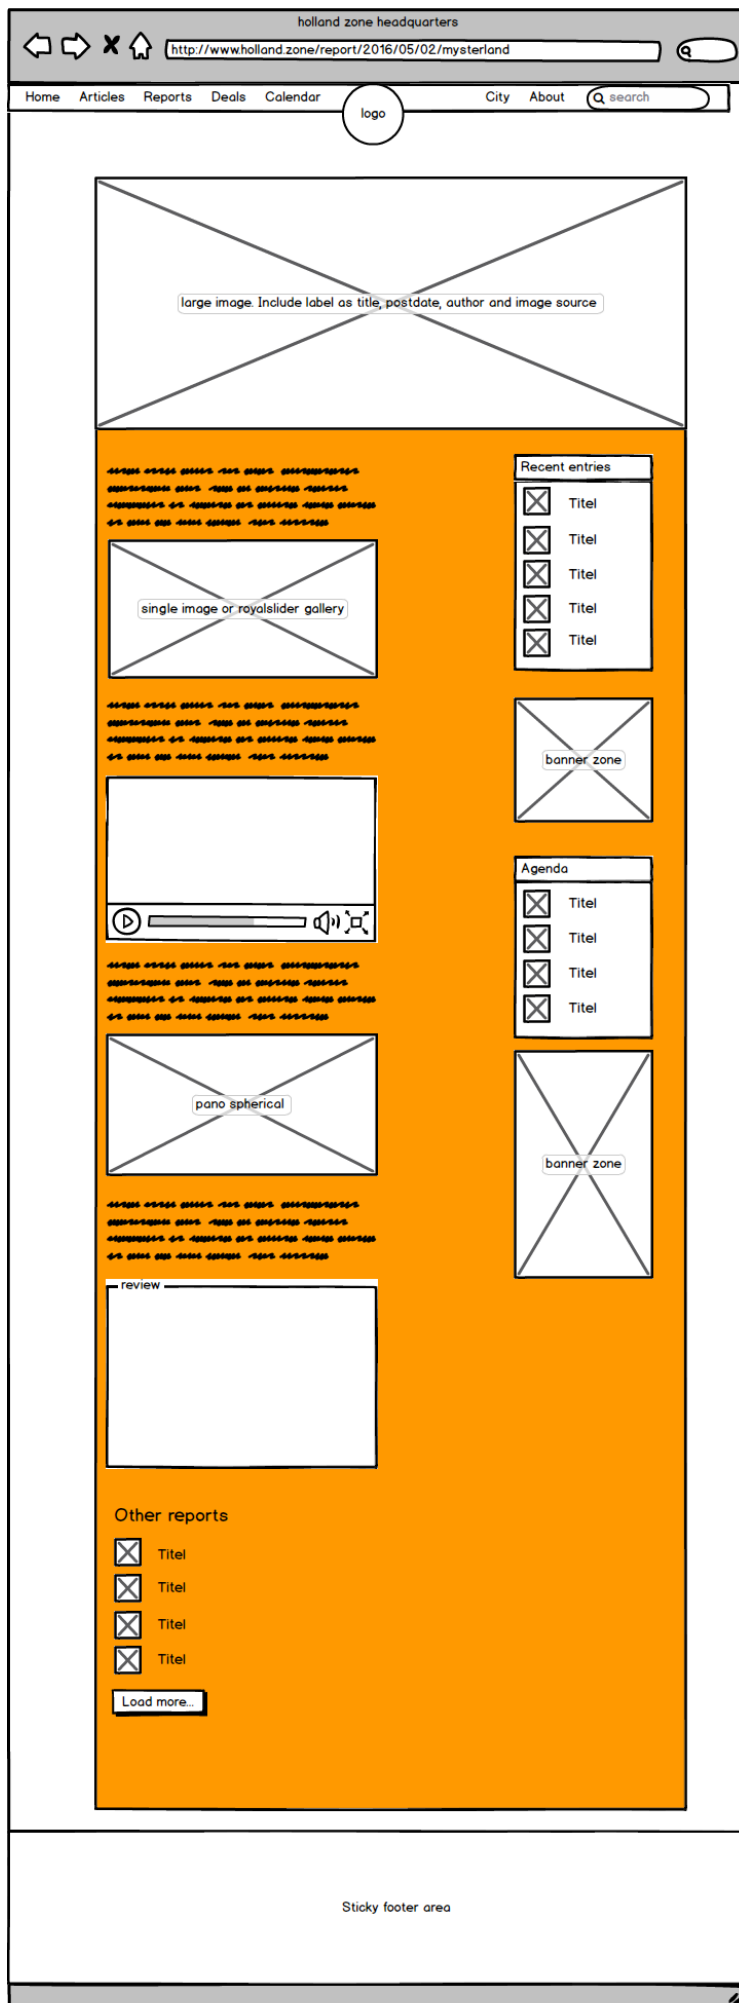

Also look at the comment for the report page.

The "single" article pages will also have the Disqus comment system.

single image should load in lightbox. Whether its a image, gallery or video, it should be responsive.

These are all widget html code, so it could be potentially used on other pages like the article or deal page.
